Forecast for Friday 05 May 2023

Weather: Cloud and outbreaks of showery rain overnight and to start the morning. However, the cloud will lift and break with some sunny spells developing into the afternoon, but also occasional heavy, locally thundery showers. These should gradually die out into the evening to leave mainly dry conditions overnight.

Chance of cloud-free hill tops above 600m: 10% at first but improving through the morning to 90% by afternoon.

Low Cloud and visibility: Rather extensive cloud above 400m at first, giving poor visibilities across the summits. However, this should readily lift and break through the morning to leave most summits clear by afternoon, with generally good or very good visibility. However, temporary reductions are likely in any heavy showers/thunderstorms.

Meteorologist's View

Occasional heavy afternoon showers carry a low risk of lightning and hail.

Recent rainfall: measured at Malham: altitude 375m

Recorded at	Last 24 hours:	Last 48 hours:	Last 72 hours:
14:00 on Thu 04 May 2023	0mm	0mm	0mm

Forecast for Saturday 06 May 2023

Weather: Dry overnight and at first, with some patchy cloud on eastern upslopes. This should soon disperse in the morning with some bright spells for a time, and the odd shower. However, cloud thickening into the afternoon with outbreaks of rain spreading from the south, some heavy.

Maximum wind: South-Southeast 10mph with gusts 15-20mph.

Chance of cloud-free hill tops above 600m: 40% improving to 90% for a time, then deteriorating to 10% later.

Low Cloud and visibility: Patchy cloud and poor visibility perhaps just affecting lower eastern slopes at first, before becoming generally good with cloud largely above summits. However, into the afternoon and evening cloud thickening and lowering, with poor visibility becoming extensive above 400m.

Temperature: **Valleys:** Plus 6C rising to 17C.
At 600m: Plus 11C
Freezing level: Above summits
